

# Electric Car Conversion: 1989 Pontiac Firefly

If a small group of High School Students can make this, what can you do?

This 1989 Pontiac Firefly was converted by a group of students at Marian Academy in 1995. It is the second vehicle out of three they converted from Gas to Electric, creating this Zero Emission Vehicle.

In short - it uses a straight forward concept – remove the Gasoline Engine and its Gas Components (Tank, fuel lines, etc.) and to the 5-speed transmission, connect a DC Electric Motor with an adapter plate, add motor controller, Batteries, and voila! – No More Gas, No Idling, No Emissions, No Oil Changes, No Exhaust Changes, No Drive Clean Test! No Gas Station Stops & Line-ups!

So – that is the basics of the car, now – what can you do for emission reduction? If you think you like the Idea of driving electric car conversions, and you want to be on the list of users of this concept, project, and demonstrate your support publicly by buying an advertising spot on the car, now is your chance to make a statement! Make a statement – you want to see more Plug-in Electric Cars – not in the future, but – in the here and now! As an advertiser, your name can also be added to potential buyers, for your custom conversion.

If you would like information on how to Advertise on this vehicle, showing you support Plug-In Electric Cars, called Battery Electric Vehicles (BEV's), or Zero Emission Vehicles (ZEV's), go to the web at: [www.aircraft-computational.com/electricfly/advertise](http://www.aircraft-computational.com/electricfly/advertise), or fill out this page and Fax it to 416-901-9191, or mail it to: ElectricFly Advertising, 35B-10520 Yonge Street, Suite 265, Richmond Hill, Ontario L4C 3C7.
